

WHAT IS CLAIMED IS:

1. A device for treating a keratinous surface of a body, the device comprising:
an envelope defining an opening configured to receive a user's hand, the envelope
comprising:
a first outer face comprising a nonwoven fibrous material and having a first
roughness, and
a second outer face comprising a nonwoven fibrous material and having a second
roughness that differs from the first roughness.
2. The device of claim 1, wherein the first roughness is configured so as to
exfoliate the keratinous surface of the body.
3. The device of claim 1, wherein the second roughness is less than the first
roughness.
4. The device of claim 3, wherein the second outer face is configured to at least
one of soothe and apply a product to the keratinous surface of the body.
5. The device of claim 1, wherein the device is permeable.
6. The device of claim 1, wherein the envelope is substantially symmetrical
about a longitudinal axis of the envelope.

7. The device of claim 6, wherein the envelope is configured as a mitten having two independent thumb portions at opposite lateral ends.

8. The device of claim 6, wherein the envelope is configured as a glove.

9. The device of claim 1, wherein the envelope is configured as a mitten having two independent thumb portions.

10. The device of claim 1, wherein the envelope is configured as a glove.

11. The device of claim 1, wherein the envelope is configured as a mitten.

12. The device of claim 1, wherein the envelope has a shape chosen from substantially square, substantially rectangular, substantially elliptical, and substantially circular.

13. The device of claim 1, wherein the nonwoven material of each of the first and second outer faces is chosen from a nonwoven material comprising thermoplastic fibers.

14. The device of claim 13, wherein the thermoplastic fibers comprise polyolefin fibers.

15. The device of claim 14, wherein the polyolefin fibers are chosen from polypropylene fibers, polyethylene fibers, and polyester fibers.

- 204770-24EE-H00T
16. The device of claim 13, wherein the thermoplastic fibers are combined with natural fibers.
17. The device of claim 16, wherein the natural fibers comprise cellulose type fibers.
18. The device of claim 1, wherein the first outer face comprises a first nonwoven material and the second outer face comprises a second nonwoven material that differs from the first nonwoven material.
19. The device of claim 1, wherein the first outer face is made of a sheet of nonwoven material having a thickness ranging from about 400 micrometers to about 1000 micrometers.
20. The device of claim 1, wherein the first outer face is made of a sheet of nonwoven material having a thickness ranging from about 450 micrometers to about 600 micrometers.
21. The device of claim 1, wherein the second outer face is made of a sheet of nonwoven material having a thickness ranging from about 300 micrometers to about 1000 micrometers.

22. The device of claim 1, wherein the second outer face is made of a sheet of nonwoven material having a thickness ranging from about 450 micrometers to about 600 micrometers.

23. The device of claim 1, wherein the first outer face is made of a first sheet of nonwoven material and the second outer face is made of a second sheet of nonwoven material.

24. The device of claim 23, wherein the first sheet and the second sheet are attached together along their respective peripheral regions.

25. The device of claim 24, wherein the first sheet and the second sheet are attached via heat sealing.

26. The device of claim 23, wherein the first sheet of nonwoven material defines the opening and forms the first outer face, and the second sheet is attached to the first sheet to form the second outer face.

27. The device of claim 1, wherein at least one of the first outer face and the second outer face is configured to be impregnated with at least one product.

28. The device of claim 1, wherein at least one of the first outer face and second outer face is impregnated with at least one product.

29. The device of claim 28, wherein the product is chosen from a cosmetic product and a care product.

30. The device of claim 1, wherein the first outer face is configured to be impregnated with at least one first product and the second outer face is configured to be impregnated with at least one second product differing from the first product.

31. The device of claim 1, wherein the first outer face is impregnated with at least one first product and the second outer face is impregnated with at least one second product differing from the first product.

32. The device of claim 31, wherein the first product and second product are chosen from a cosmetic product and a care product.

33. The device of claim 32, wherein the first product and the second product are chosen from an exfoliative product, a moisturizing product, a soothing product, and a cleansing product.

34. The device of claim 1, wherein the keratinous surface comprises skin.

35. A method of treating a keratinous surface of a body, the method comprising:
providing the device of claim 1;
massaging a portion of the body to be treated with the first outer face; and
massaging a portion of the body with the second outer face.

36. The method of claim 35, wherein the first roughness is configured to exfoliate the keratinous surface of the body and the massaging of the portion of the body with the first outer face occurs prior to the massaging of the portion of the body with the second outer face.

37. The method of claim 36, wherein the second roughness is configured to at least one of soothe and apply a product to the keratinous surface of the body and the massaging of the portion of the body with the second outer face comprises at least one of soothing and applying a product to the keratinous surface of the body.

38. The method of claim 35, further comprising inserting a hand into the opening of the envelope.

39. The method of claim 38, further comprising changing the position of the envelope with respect to the hand so as to change the relative positions of the first outer face and the second outer face with respect to the hand between the massaging with the first outer face and the massaging with the second outer face.

40. The method of claim 35, further comprising impregnating at least one of the first outer face and the second outer face with at least one product.

41. The method of claim 40, wherein the at least one product is chosen from a cosmetic product and a treatment product.

42. The method of claim 41, wherein the at least one product is chosen from an exfoliative product, a moisturizing product, a soothing product, and a cleansing product.

43. The method of claim 40, wherein the impregnating comprises impregnating the first outer face with a first product and impregnating the second outer face with a second product that differs from the first product.

44. The method of claim 40, further comprising inserting a hand into the opening of the envelope, wherein the impregnating of at least one of the first outer face and second outer face occurs while the hand is inserted in the envelope.

45. The method of claim 40, wherein the impregnating comprises impregnating both the first outer face and the second outer face with the product.

46. The method of claim 45, wherein the impregnating of both the first outer face and the second outer face comprises applying the at least one product to one of the first outer face and the second outer face.

47. The method of claim 40, wherein the impregnating of at least one of the first outer face and the second outer face with the at least one product is performed by other than a user of the device.

48. The method of claim 35, wherein the massaging of the portion of the body with the first outer face comprises exfoliating the portion of the body.

49. The method of claim 35, wherein the portion of the body massaged with the first outer face is one of the same as and differing from the portion of the body massaged with the second outer face.

50. A system for treating a keratinous surface of a body, the system comprising:
the device of claim 1; and
at least one product for treating the keratinous surface.

51. The system of claim 50, wherein the at least one product is chosen from a cosmetic product and a care product.

52. The system of claim 51, wherein the at least one product is chosen from an exfoliative product, a moisturizing product, a soothing product, and a cleansing product.

53. The system of claim 50, wherein the at least one product comprises a first product and a second product differing from the first product.

54. The system of claim 53, wherein the first outer face is configured to be impregnated with the first product and the second outer face is configured to be impregnated with the second product.

55. The system of claim 50, wherein the first outer face and the second outer face are configured to be impregnated with the at least one product.

56. The system of claim 55, wherein the at least one product is configured to be applied to the first outer face and the second outer face so as to impregnate both the first outer face and the second outer face.

57. The system of claim 50, wherein at least one of the first outer face and the second outer face is impregnated with the at least one product.

58. The system of claim 57, wherein at least one of the first outer face and the second outer face is impregnated with the at least one product by other than a user of the device.

59. The system of claim 50, wherein the envelope is substantially symmetrical about a longitudinal axis of the envelope.

60. A device for treating a keratinous surface of a body, the device comprising:
an envelope defining an opening configured to receive a user's hand, the envelope comprising

a first outer face having a first roughness, and

a second outer face having a second roughness that differs from the first roughness,

wherein at least one of the first outer face and the second outer face comprises a nonwoven fibrous material.

61. The device of claim 60, wherein the first roughness is configured so as to exfoliate the keratinous surface of the body.

62. The device of claim 60, wherein the second roughness is less than the first roughness.

63. The device of claim 62, wherein the second outer face is configured to at least one of soothe and apply a product to the keratinous surface of the body.

64. The device of claim 60, wherein the device is permeable.

65. The device of claim 60, wherein the envelope is substantially symmetrical about a longitudinal axis of the envelope.

66. The device of claim 65, wherein the envelope is configured as a mitten having two independent thumb portions at opposite lateral ends.

67. The device of claim 65, wherein the envelope is configured as a glove.

68. The device of claim 60, wherein the envelope is configured as a mitten.

69. The device of claim 60, wherein the envelope has a shape chosen from substantially square, substantially rectangular, substantially elliptical, and substantially circular.

70. The device of claim 60, wherein the nonwoven material is chosen from a nonwoven material comprising thermoplastic fibers.

71. The device of claim 70, wherein the thermoplastic fibers comprise polyolefin fibers.

72. The device of claim 71, wherein the polyolefin fibers are chosen from polypropylene fibers, polyethylene fibers, and polyester fibers.

73. The device of claim 70, wherein the thermoplastic fibers are combined with natural fibers.

74. The device of claim 73, wherein the natural fibers comprise cellulose type fibers.

75. The device of claim 60, wherein the first outer face comprises a first nonwoven fibrous material and the second outer face comprises a second nonwoven fibrous material that differs from the first nonwoven fibrous material.

76. The device of claim 60, wherein the first outer face is made of a sheet of nonwoven material having a thickness ranging from about 400 micrometers to about 1000 micrometers.

77. The device of claim 60, wherein the second outer face is made of a sheet of nonwoven material having a thickness ranging from about 300 micrometers to about 1000 micrometers.

78. The device of claim 60, wherein the first outer face is made of a first sheet of material and the second outer face is made of a second sheet of material.

79. The device of claim 78, wherein the first sheet and the second sheet are attached together along their respective peripheral regions.

80. The device of claim 79, wherein the first sheet and the second sheet are attached via heat sealing.

81. The device of claim 78, wherein the first sheet defines the opening and forms the first outer face, and the second sheet is attached to the first sheet to form the second outer face.

82. The device of claim 60, wherein at least one of the first outer face and the second outer face is configured to be impregnated with at least one product.

83. The device of claim 60, wherein at least one of the first outer face and second outer face is impregnated with at least one product.

84. The device of claim 83, wherein the product is chosen from a cosmetic product and a care product.

85. The device of claim 60, wherein the first outer face is configured to be impregnated with at least one first product and the second outer face is configured to be impregnated with at least one second product differing from the first product.

86. The device of claim 60, wherein the first outer face is impregnated with at least one first product and the second outer face is impregnated with at least one second product differing from the first product.

87. The device of claim 86, wherein the first product and second product are chosen from a cosmetic product and a care product.

88. The device of claim 87, wherein the first product and the second product are chosen from an exfoliative product, a moisturizing product, a soothing product, and a cleansing product.

89. The device of claim 60, wherein the keratinous surface comprises skin.
